A Project synopsis on
WORDPRESS PORTFOLIO WEBSITE

Submitted by:

Mansi (20BCA1347)

Submitted to:

Ms. Jyoti Saini

Declaration by the Candidate

I hereby declare that the project report entitled “**WORDPRESS PORTFOLIO WEBSITE**” Submitted by me to **University Institute of Computing, Chandigarh University, Gharuan**, in partial fulfilment of the requirement for the award of degree “**Bachelor of Computer Application (BCA)**” is a Bonafede project work carried out by me under the guidance of “**Ms. Jyoti Saini**”. I further declare that the work reported in this project has not been submitted and will not be submitted, either in part or in full, for the award of any other degree or diploma in this institute or any other institute or university.

Name of Student
Mansi

UID
20BCA1347

Certificate Of Originality

This is to certify that the project report entitled
“**WORDPRESSPORTFOLIO WEBSITE**” submitted by me in partial
fulfilment of the requirements for the award of the Degree BCA (Bachelor
of Computer Application) is a bonafede record of the work carried out
under my guidance and supervision at University Institute of Computing
of the Chandigarh University.

Name of Student

Mansi

UID

Portfolio Website

ABSTRACT

Personal portfolio website is developed for the purpose of providing personal information and services. Home page simply provided name and profession. About page give personal information and CV is also attached in about page which can be downloaded by any user who wants to look for CV. Contact page provides personal contact information and services page gives services related information for website. Website is developed using HTML CSS and Javascript as a front end-design and for back – end MySQL I is use for database and procedural PHP language is used for server site programming. There are certain areas where a website portfolio is more important than others. If you find yourself in one of the following, it's safe to assume that you need a portfolio like a book needs words.

व्यक्तिगत पोर्टफोलियो वेबसाइट व्यक्तिगत जानकारी और सेवाएं प्रदान करने के उद्देश्य से विकसित की गई है। होम पेज केवल नाम और पेशा प्रदान करता है। पेज के बारे में व्यक्तिगत जानकारी देते हैं और सीवी भी पेज के बारे में संलग्न है जिसे कोई भी उपयोगकर्ता डाउनलोड कर सकता है जो सीवी देखना चाहता है। संपर्क पृष्ठ व्यक्तिगत संपर्क जानकारी प्रदान करता है और सेवा पृष्ठ वेबसाइट के लिए सेवाओं से संबंधित जानकारी देता है। वेबसाइट का उपयोग करके विकसित किया गया है। कुछ ऐसे क्षेत्र हैं जहां एक वेबसाइट पोर्टफोलियो दूसरों की तुलना में अधिक महत्वपूर्ण है। यदि आप अपने आप को निम्न में से किसी एक में पाते हैं, तो यह मान लेना सुरक्षित है कि आपको एक पोर्टफोलियो की आवश्यकता है जैसे एक पुस्तक को शब्दों की आवश्यकता होती है।

Introduction

WordPress is a free, open-source website creation platform. , WordPress is the easiest and most powerful blogging and website builder in existence today. A portfolio website is a **unique way to showcase your work** and let others know about yourself. It's like an evergreen platform for your projects, case studies, and information about you. In addition, it's one of the best ways to express your personality, experience, and capabilities. WordPress is an excellent website platform for a variety of websites. From blogging to e-commerce to business and portfolio websites, WordPress is a versatile CMS. Designed with usability and flexibility in mind, WordPress is a great solution for both large and small websites. A portfolio website gives you your own dedicated space to promote your skills, services and previous work. It's your shop window on the internet – once you build your portfolio site, potential clients will be able to more easily find you, see exactly what you do, learn what you offer and feel confident in hiring you. A WordPress website is any website that uses WordPress as its content management system (CMS). WordPress powers both the *backend* of the website (the interface where a user logs in to make changes or add new content) and the *frontend* (the visible part of the website that your visitors see on the web). For many businesses and entrepreneurs, an online portfolio is an important marketing aid. For some, having a professional portfolio is critical. To best serve its owner, an online portfolio, like a website, must have certain features and functionalities that will attract viewers, present content that will hold their attention, and encourage them to respond to a clear or implied call to action.

Client Identification and Recognition of need

Just like our appearance and demeanor influence first impressions, your portfolio impacts how others view you as a creative professional. Make sure you're putting your best foot forward. Using a high-quality image can show potential clients that you are professional but approachable. Including a smile can also make you seem more trustworthy to your customers and even help you makemoremoney. Alternatively, you can use the photo to show off your personalbrand and identity. If you're a photographer or graphic designer, you may like to stylize your image according to your professional aesthetic.

Up to 91percentofpeople are more likely to use a business with positive online reviews. As such, displaying detailed testimonials from your previous clients can go a long way to landing new ones. You can add customer testimonials to your portfolio by using the built-inTestimonialsfeaturefromWordPress.com. You can activate it by navigating to *Settings > Writing > Content Types*.

Recognition & knowledge of relevant contemporary issues.

A portfolio website is a **unique way to showcase your work** and let others know about yourself. It's like an evergreen platform for your projects, case studies, and information about you. In addition, it's one of the best ways to express your personality, experience, and capabilities. It only takes a few seconds to lose a visitor's attention, so to be sure to use these seconds smart. The industry visits and industry based project work as part of the curriculum to get recognition and reward to the students in the form of job offer or support for further studies and research. Your potential clients will see the visuals first and if they like what they see, they will continue looking for more details. In other words, you need an

awesome

and appealing presentation of your works. Having some words from your clients can be very meaningful for those who just landed on your page. You can list your skills and tell how great you are but **letting others say it can have a big influence.**

Project Identification

Project Identification is a repeatable process of analyzing and approving of candidate projects as reasonable to be undertaken by the organization. This process is applied when organization needs to make right choice between several candidate projects in order to undertake the most advisable one. *Project identification* includes studying, documenting, validating, ranking and approving candidate projects to be included into an organization's portfolio. Identification of a project is started from identification of a problem underlying it, so the problem is based upon a "root" – a problem it addresses and concentrates at to deliver a solution for, and then it gets identified with more details, such as resources, etc. Project identification is necessary to: Validate a business need and justification for each candidate project;

- Accept and apply objective criteria to rank the candidate projects;
- Control and limit involvement of resources into projects reasoning from their reasonability;
- Plan the workforce to serve the anticipated HR needs of the candidate projects;
- Allow a more reasonable investment policy based upon profitability of candidate projects;

Task Identification

You can identify tasks based on the time it takes to complete them.

1. "Rule of twos" – no task should be worked on shorter than two days, or longer than two weeks.
2. Three-point estimation – assess the length of the task based on the best/worst/most likely case scenario.

Task 1:

Getting Domain name

Task 2: Get a hosting provider

Task 3: A working , fresh wordpress installation

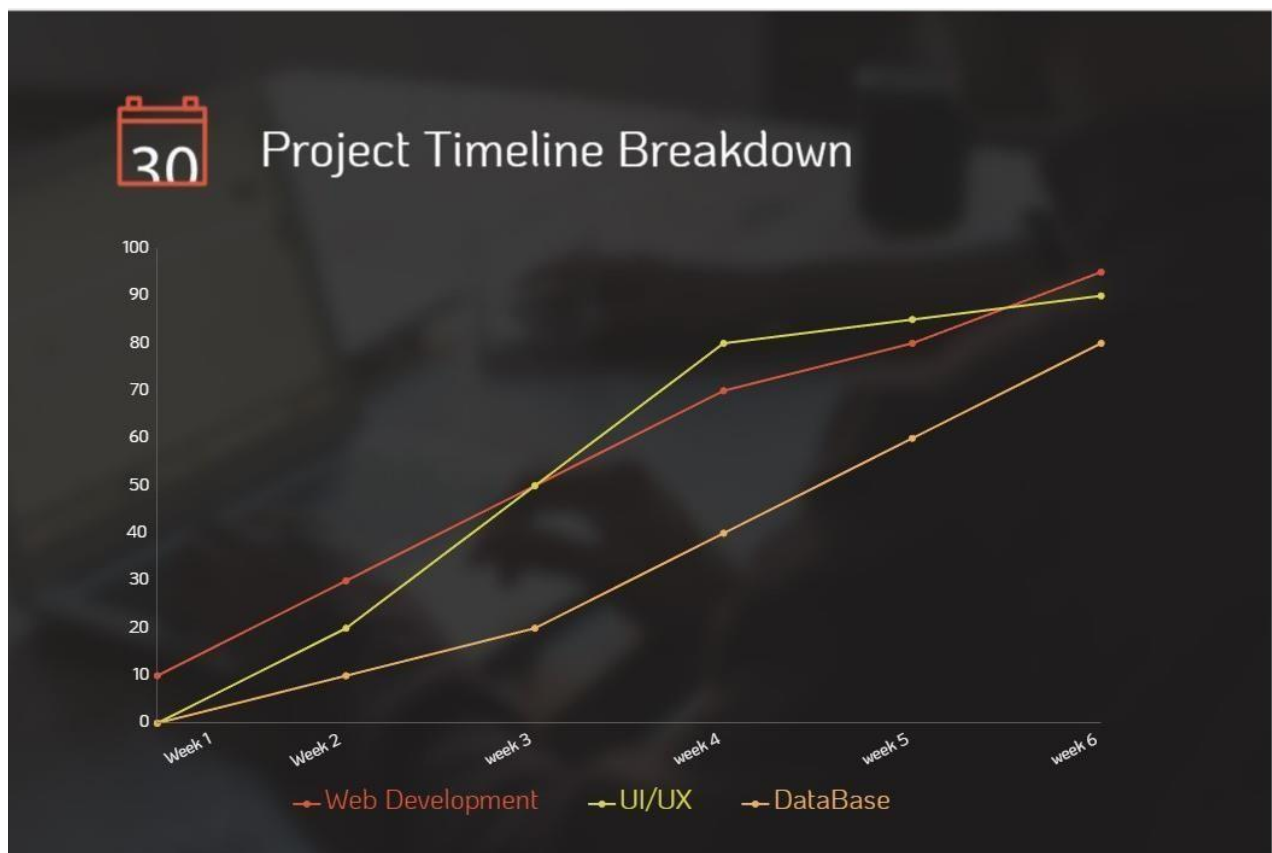

Task 4: Plan out your website structure

Task 5: Install and create a portfolio page

Task 6: Publishing website

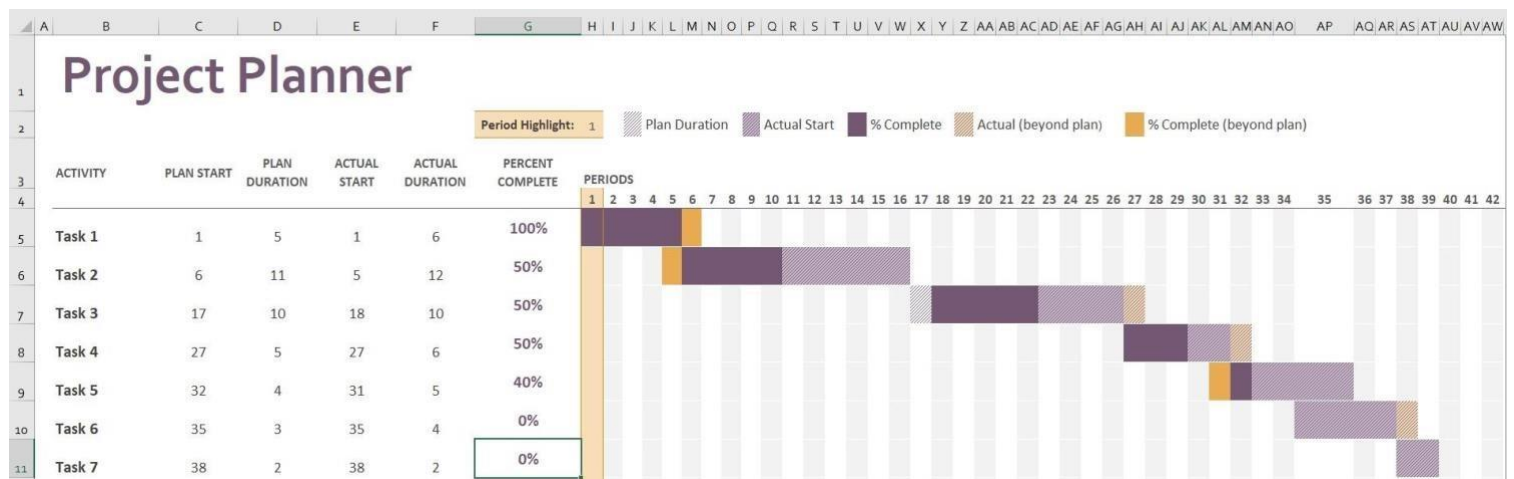

.

Timeline of the project

Gantt Chart

What is Gantt chart? A Gantt chart, commonly used in project management, is one of the most popular and useful ways of showing activities (tasks or events) displayed against time. On the left of the chart is a list of the activities and along the top is a suitable time scale. Each activity is represented by a bar; the position and length of the bar reflects the start date, duration and end date of the activity. Gantt chart is a tool that allows you to plan all your projects. You can organize projects, improve transparency and visibility of projects and track everyone assigned to any project. Adding a Gantt chart plugin to your WordPress site assists you to schedule and manage your projects in the simplest way possible. With this plugin, you can balance multiple projects at a time from your WordPress dashboard. This allows you to see at a glance:

Relevant topics identified for literature review

A literature review summarises, critically analyses and evaluates previous research available on the subject, presenting this in an organised way. It should address a clearly articulated question or series of questions. Use portfolios to manage and showcase projects on your site. Commonly used by creative professionals, this type of content is a great way to promote your work.

Problem Definition

Installing the system and building a simple site based on this CMS don't require a professional WordPress website developer. However, as the site grows more complex and an increasing number of third-party add-ons are tacked onto it, it may begin manifesting all sorts of quirks. In many cases, a layman doesn't have enough expertise to find out what causes these issues exactly. That's when the services of an expert WordPress developer or WordPress development agency are indispensable. The PSD2HTML WordPress Website Development experts have fixed problems with WordPress on thousands of websites.

Wrong Data for Connection First, make sure that you've specified the right username, password, hostname, and DB name in the wp-config.php file.

Perhaps, someone has changed these without telling you about it. Find the file and verify the data. Wrong? Edit. Right? Keep searching for the cause.

Hosting Provider or Server Another possible culprit is your hosting provider. You may have saved more data to your DB than the provider allows you to. Get

in touch

with them and find it out. In addition, the server itself can be out of order at the moment. Then, it's time that heals.

Goals and Objectives of our website

1. **Brand Image** Your website is a replica of your brand and everything it depicts. It is always one of the things people get to look at when they first get to hear about your brand (business) which therefore helps in creating the first impression.
2. **Layout** One of the rules of thumb is keeping your website's layout very simple, neat, and designed in a matter that will bring much attention to the most essential parts. However, the number of menu options or elements in a drop-down menu should be analyzed based on your target audience's taste.
3. **FONTS AND TYPOGRAPHY** The main rule for choosing a font in a design layout is that it should be easy to read and visible on the background color that you choose. Your font should also reflect your brand identity and be dependent on if you want to look corporate, fun, and youthful.
4. **WEBSITE ACCESSIBILITY** Web Accessibility is making online content from websites to other technologies which are going to be within the reach of people with disabilities (auditory, cognitive, neurological, physical, speech, visual). According to the quote which says that
"The power of the web is in its universality. Access by everyone regardless of disability is an important facet. Tim Berners-Lee"

FEATURE/CHARACTERISTIC SELECTION

Design = The design you choose can mean the difference between driving most customers away and inspiring most of them to bite. This is especially true if you're a web designer as your website *is* an example of your work. Minimalism is definitely the way to go when it comes to portfolio sites. You're trying to attract new customers with your work, therefore, you should choose a design that draws attention *toward* your portfolio and any information you list about your business, not away from them.

Logo with Tagline= This doesn't need to be complicated, and you can use a simple text-based logo that displays your name. What's important is your tagline as it can describe yourself and the services you provide with a quick, short phrase. This provides a quick way for visitors to decide if your services are right for them before they contact you.

Services

=Sure, you may be a photographer or a web designer, but those likely aren't the only services you provide to your customers.

Designate a

spot on your homepage that briefly lists the services you offer.

Generate multiple design alternates

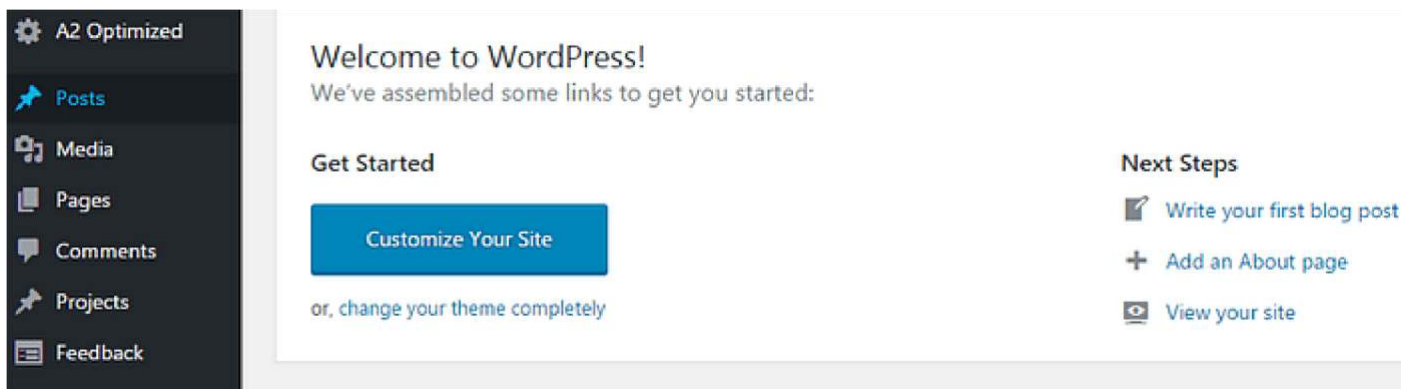

Wix– best all-around website builder in the market today. Its simple-touse design features mean you can literally drag and drop any content you want on your website, without touching a line of code.

Squarespace– best for design, It gives you the ability to build a gorgeous, polished looking website. It's not as easy to use as Wix, but still much easier to use and customize compared to WordPress.

Weebly–

best for small business, It is one of the easiest to use drag-and-drop website builders available today. The user interface is stripped back and intuitive, making it easy to learn how to build your website (again, without touching a line of code).

Shopify– the best all-around ecommerce website builder, The benefit of using Shopify is that it takes care of all the technical stuff for you, so you can focus on building and growing your business. Basically, it makes building an ecommerce website much easier than WordPress does.

ABOUT ME

I'M PROACTIVE!

You will never need to hire another
freelancer.

**I MAKE A KILLER CUP OF
COFFEE**

That means I won't ever fall asleep at
work meetings.

I'M ORGANIZED

I can make 'to-do' lists with the best
them!

PROJECT SPECIFICATION

Activate Portfolios : If you don't already see *Portfolio* in your list of options in the left sidebar of your dashboard, go to *Settings* → *Writing* → *Content Types* and turn on the **Portfolio Projects** option.

Project Settings : When working on your portfolio projects, you'll see the Project settings on the right side of your screen. If the page settings are not there, you may need to click on the (gear) icon in the top right corner to bring up the settings.

Display Portfolio Projects On Your Site There are a few different ways to view your portfolio projects after you have created them.

Portfolio

Page :

After activating portfolios and publishing at least one project, you'll have a new page of your site at the following address:

Project Type & Tag Pages

To keep things organized, which is especially important if you have a lot of projects, you can use Project Types and Project Tags:

- **Project Types** are used to sort portfolio projects into broader groups. For example, an artist may have categories for watercolors, sketches, and sculpture.
- **Project Tags** specifically describe what each portfolio project contains. For example, the artist may tag a project with painting, green, blue, sky, landscape, and texture.

When you are creating your projects, you'll find the options to add types and tags in the project settings on the right.

You can view, edit, and delete your project types and tags by going to Portfolio → Project Types or Portfolio → Project Tags in your WordPress dashboard. You may also add them to your site's menu for visitors to view your projects by specific types or tags.

Troubleshooting : If any of the Portfolio page links result in a "Page Not Found" error, this can be fixed by disabling and re-enabling the Portfolio content type. Go to Settings → Writing → Custom Content Types, uncheck the Portfolio Projects option, save your changes, and then recheck the Portfolio Projects option and save your changes again.

TESTING

The goal is

to make sure that content and functionality remain uniform across browsers and devices. The following features must be tested in a cross browser testing suite:

- **Base Functionality:** Verify that input fields, navigation, touch input for mobile devices, etc. work across browsers/devices.
- **Design:** Verify that the layout, and all its components, are responsive. Use this [freeresponsive design checkerto checkresponsive design](#) on real devices.
- **Accessibility:** WordPress follows strict coding standards and guidelines, but your custom code might not. Ensure compliance with Web Content Accessibility Guidelines (WCAG) so differently-abled users can access your website.

CONCLUSION

A good-looking portfolio site on WordPress can open a lot of doors to meeting (and impressing) potential clients. It provides employers with a better idea of your capabilities, *and* enables you to set yourself apart from the competition. The entire process will take some time – especially if you aren't familiar with WordPress – but as we've shown, it's definitely achievable with minimal effort.

Here are the eight basic steps you'll need to follow in order to make a portfolio site:

1. Choose a good WordPress host.
2. Install WordPress.
3. Find and install the right theme and plugins.
4. Build a header.
5. Build a project gallery.
6. Put together an *About Me* section.
7. Set up a contact form.

8. Flesh
out your brand new WordPress portfolio site.

Activate Portfolios : If you don't already see *Portfolio* in your list of options in the left sidebar of your dashboard, go to *Settings* → *Writing* → *Content Types* and turn on the **Portfolio Projects** option.

Project Settings : When working on your portfolio projects, you'll see the Project settings on the right side of your screen. If the page settings are not there, you may need to click on the (gear) icon in the top right corner to bring up the settings.

Display Portfolio Projects On Your
Site

There are a few different ways to view your portfolio projects after you have created them.

Portfolio Page : After activating portfolios and publishing at least one project, you'll have a new page of your site at the following address:

Project Type
& Tag Pages

To keep things organized, which is especially important if you have a lot of projects, you can use Project Types and Project Tags:

- **Project**

Types are used to sort portfolio projects into broader groups. For example, an artist may have categories for watercolors, sketches, and sculpture.

- **Project Tags** specifically describe what each portfolio project contains. For example, the artist may tag a project with painting, green, blue, sky, landscape, and texture.

When you are creating your projects, you'll find the options to add types and tags in the project settings on the right.

You can view, edit, and delete your project types and tags by going to Portfolio → Project Types or Portfolio → Project Tags in your WordPress dashboard. You may also add them to your site's menu for visitors to view your projects by specific types or tags.

Troubleshooting : If any of the Portfolio page links result in a "Page Not Found" error, this can be fixed by disabling and re-enabling the Portfolio content type. Go to Settings → Writing → Custom Content Types, uncheck the Portfolio Projects option, save your changes, and then recheck the Portfolio Projects option and save your changes again.
